(57) Abstract :

The present invention provides a sensor-based postural correction meditation chair. This invention is not just a regular meditation chair; it is a smart meditation chair designed to help users maintain the correct posture without any discomfort. Most meditation chairs nowadays only offer basic rests or back support, leading to slouching and poor posture when the body is relaxed. This invention is different because it uses a gentle, sensor-based system that detects when the user begins to slouch. Instead of interrupting the meditation with a buzz or alarm, the chair gently adjusts itself to encourage the user to sit upright again, without distracting their focus. The chair acts like a calm and meditation teacher that gently reminds you to sit up straight, helping you learn better posture over time without interrupting meditation.
