Clinical Grand Round

Date : 28.01.2023
Day : Saturday

Time : 03:30 PM – 04:30 PM
Venue: HLT-2 (Near Emergency)

Topic: "Toxic Epidermal Necrolysis: Approach & Management"

Primum non nocere ("first of all be sure you do no harm")
 - Hippocrates (460-370 BC)

Abstract:

When it comes to administering medicine, even with the best intentions; the Hippocratic oath gets defeated many times. Adverse drug reactions (ADRs) are as old as medicine itself and may at times be life threatening.

ADRs are reportedly responsible for up to 7% of hospital admissions and up to 30-45% of the ADRs are reportedly cutaneous in nature. 2% of which may be severe and few may even end in fatalities.

The most common morphological types of cutaneous ADRs range from maculopapular, urticaria/angioedema to fixed drug eruptions, and the common incriminating drug groups remain antimicrobials, anticonvulsants and non-steroid anti-inflammatory drugs (NSAIDs). Cutaneous ADRs in the form of Stevens-Johnson syndrome (SJS), toxic epidermal necrolysis (TEN), drug hypersensitivity reactions (DHR) or drug reaction with eosinophilia and systemic symptoms (DRESS) or drug-induced hypersensitivity syndrome (DIHS) and acute generalized exanthematous pustulosis (AGEP) could be severe and life threatening. The term severe cutaneous adverse reactions (SCAR) was proposed for such conditions, as they were (a) severe, (b) unpredictable and (c) drug induced. Multiple organ system involvement in SCARs necessitates a multispecialty approach. In the absence of effective evidence-based treatment protocols and with no consensus on treatment of SCARs, especially with the use of systemic steroids, controversies still exist in the management of SCARs.

The aim of the CGR this week is to sensitize all about wide clinical presentations of SCARs. We will be presenting a case of TEN and the departmental management protocol emphasising on multispecialty team work.
