Date: June 18, 2026

Date: June 20, 2026

Day: Saturday

Time: 12:30 to 1:30 pm

Venue: Conference Room

Topic: CNE on "Simulation in Nursing"

Speakers: Dr. Rajesh Kumar, Professor, Himalayan College of Nursing, Swami Rama Himalayan University

Abstract:

A session on the "Simulation in Nursing" is being organized for faculty members. Simulation has become an essential component of nursing education as it provides a safe and controlled environment for developing clinical skills, critical thinking, decision-making abilities, communication, and teamwork without compromising patient safety. The programme aims to enhance faculty knowledge and competencies in the effective use of simulation-based teaching and learning strategies, including the planning, implementation, and evaluation of simulation activities to improve student learning outcomes.

All faculty members are requested to attend.

Report on Simulation in Nursing

Name of Activity: CNE on "Simulation in Nursing"

Date: June 20, 2026

Time: 12:30 to 1:30 pm

Venue: Conference room, HCN

No. of Participants: 27

Continuing Nursing Education (CNE) organised an enriching session on "Simulation in Nursing," which was successfully conducted for faculty members, led by Dr Rajesh Sharma, Professor, Himalayan College of Nursing, Swami Rama Himalayan University. The session aimed to enhance participants understanding of simulation-based learning and its significance in nursing education and clinical practice.

The speaker highlighted simulation as an effective teaching-learning strategy that bridges the gap between theoretical knowledge and clinical practice. Various types of simulation used in nursing education were discussed, including low-fidelity, medium-fidelity, and high-fidelity simulation techniques. Emphasis was placed on the importance of simulation in developing clinical competence, critical thinking, decision-making abilities, communication skills and patient safety among nursing professionals.

A major highlight of the session was the live demonstration of intravenous (IV) insertion using simulation equipment. The speaker performed the procedure step-by-step, enabling participants to observe the correct technique, infection prevention and control measures, patient safety considerations and best practices associated with IV therapy. The demonstration provided hands-on learning opportunities and enhanced the practical understanding of the participants.

The session was highly interactive, with active participation of faculty members through discussions, questions and experience sharing. The session was well appreciated for its practical orientation and engaging learning environment.
