Date: June 26, 2026
Day: Friday

Time: 12:30 to 1:30 pm
Venue: Conference Room

Chairperson
Dr. Vandana Chauhan

Topic: CNE on "Skill Standardization and Simulation"

Speakers:

Dr. Kanchan Bala, Associate Professor

Mrs. Charu Saini, Tutor

Himalayan College of Nursing, Swami Rama Himalayan University

Member Secretary
Mrs. Nitika Bhatt

Abstract:

Members

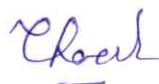

Mr. Chandan Kumar

Dr. Anupama Sharma

Mrs. Shivangi Hemdan

Continuing Nursing Education on "Skill Standardization and Simulation aims to enhance faculty competencies in standardized skill teaching practices and simulation-based education approaches. Skill standardization plays a vital role in maintaining consistency, accuracy, and quality in nursing skill training, while simulation-based learning provides a safe and realistic environment for developing clinical competency among nursing students. The session will focus on effective skill demonstration, competency-based assessment, innovative teaching strategies, and the integration of simulation methodologies to improve critical thinking, clinical decision-making, confidence, and patient safety. This CNE will support faculty members in updating their teaching practices and strengthening the quality of nursing education.

All faculty members are requested to attend.

Report on Skill Standardization and Simulation

Name of Activity: CNE on “Skill Standardization and Simulation”

Date: June 26, 2026

Time: 12:30 to 1:30 pm

Venue: Conference room and OBG Lab, HCN

No. of Participants: 28

The Continuing Nursing Education Committee successfully organized an enriching session on “Skill Standardization and Simulation”. The session was conducted by Dr. Kanchan Bala, Associate Professor, and Ms. Charu Saini, Tutor, HCN, to strengthen faculty members' understanding of standardized clinical skills and simulation-based teaching methodologies to enhance the quality and safety of nursing practice. During the session, the resource persons highlighted the significance of skill standardization in ensuring consistent, evidence-based nursing care. They emphasized simulation as an effective teaching-learning strategy that provides a safe and controlled environment for developing clinical competence, critical thinking, communication, decision-making, and teamwork among nursing professionals.

A key highlight of the program was a realistic simulation of a labour room setting. The resource persons demonstrated the complete process of a normal vaginal delivery, followed by immediate and comprehensive newborn assessment. Faculty members actively participated by assuming various healthcare roles, making the simulation highly interactive, engaging, and reflective of real clinical practice.

The session concluded with a structured debriefing, during which participants reflected on the simulation experience, discussed key learning points, and clarified clinical concepts. The realistic demonstration, coupled with active participant involvement and guided debriefing, significantly enhanced the faculty's understanding of standardized clinical procedures and reinforced the application of best practices in maternal and newborn care.
